PRICE ALERT

Group 8

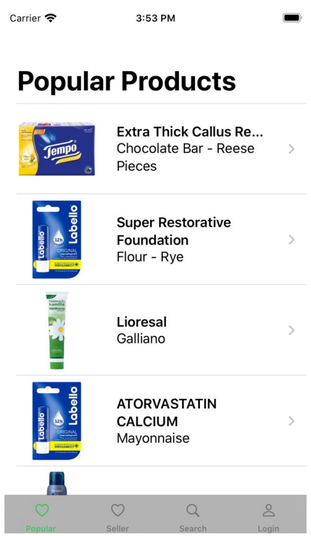
Fotis, Karla, Paul, Daniyal & Nils

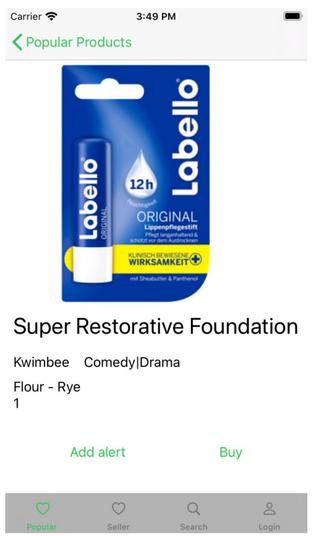
CONTEXT

Price alert is cloud-based application with the purpose of giving the cutomers opportunity to browse products and set price alert in just one application. Furthermore, the customer is able to see all the popular products, product details and many other interesting features.

WHY TO CHOOSE PRICE ALERT?

With the help of our application, customers do not have to look manually if the price drops, the application will send you an alert so the customer can buy the product at desired price. Customers can also view all popular products,filter products, search a product, view details of a product and view list of sellers and their locations.



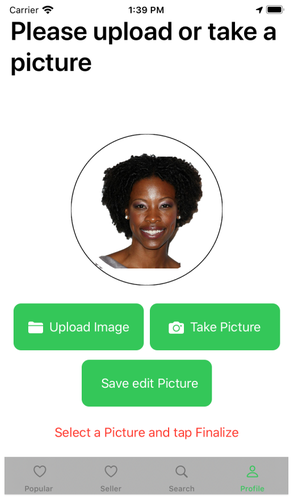


IMPLEMENTED TECHNOLOGIES

We have implemented several features to ensure that customers have good experience with the application.

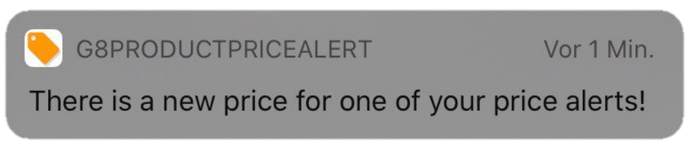
Camera

Customers can upload ther profile photo when creating an account.



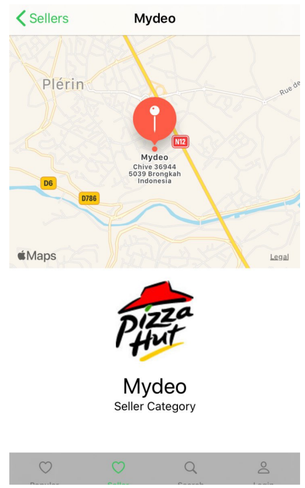
Push Notifications

Push notifications are used to send price alerts when price drops below the amount that customer set.



GPS location

As a customer you can use your GPS location to set your address automatically.



CONCLUSION

At the end of the project we have an application with mentioned features. During the development we have discovered many new technologies which helped in the realization of our initial idea.
